Press release

MERIDIAN ANNOUNCES NEW 808.3 SIGNATURE REFERENCE CD PLAYER

Amsterdam, NL—ISE Europe, Stand 5N78—February 2 to 4, 2010 -As part of a series of innovative new product launches to herald 2010, Meridian Audio has announced the introduction of the 808.3 Signature Reference CD Player, an audiophile CD player using a host of Meridian technologies, which collectively deliver the best possible sound quality from CD – the music format with the richest catalogue available. Combined, these features help CDs sound as if replay is at a high-resolution, and can even fix errors in the original recording.

For the past 25-years, Meridian has been making some of the world's finest audiophile CD players, and since the introduction of the first 808 Signature Reference CD Player in 2004, Bob Stuart and Allen Boothroyd, the company's founders, have hand-signed each one as testament to their pride in the company's ongoing achievements in the field of CD audio reproduction.

The third generation of 808 – the 808.3 Signature Reference CD Player – offers CD playback from a new specially built custom CD-ROM based drive, which allows for data recovery and error correction many times better than that employed in standard CD systems. It also offers triple FIFO buffering and, like the 808.2 before it, 808.3 employs Meridian's proprietary DSP based 'apodising' up-sampling system.

All 808.3s benefit from an array of audio inputs – analogue, digital, and a new balanced digital audio SpeakerLink input – as well as a sophisticated volume control. These inputs allow the connection of additional audio sources which can be selected and processed using the same powerful audio enhancing DSP as the internal CD source. This integrated pre-amplifier functionality means that systems built around 808.3 are simpler and easier to use than traditional hi-fi systems with separate pre-amplifiers.

Updates to 808.3's analogue input card provide superior analogue to digital conversion compared to previous models of 808i/808.2i. This improvement in conversion technology enables superior audio performance for all analogue connected sources making 808.3 a better, more valuable pre-amplifier.

In addition to its standard audio inputs, the 808.3 Signature Reference CD Player features an ID40 Sooloos Card allowing it to be directly connected to the same network as a Meridian Sooloos Digital Media System. When connected the 808.3 is seen as a zone within the system and it renders audio streamed across the network. The same connection allows infra-red control of the Sooloos's current Play Queue from the supplied MSR+ remote control handset or product front panel, while 808.3's

DSP based audio enhancement tools and triple FIFO buffering system process audio streamed over the Sooloos network, making 808.3 the highest performance network playback device.

At the output, Meridian's SpeakerLink connection system delivers the highest quality digital signals to Meridian's DSP Loudspeakers on discrete, low-cost cables with simple connectors. The 808.3 Signature Reference CD Player has new twin SpeakerLink outputs which mean left and right DSP Loudspeakers can both be connected directly to the 808.3, further simplifying wiring structure and making cables even easier to hide.

The 808.3 Signature Reference CD Player will be offered in three standard 800 Series colours; Graphite, Silver and Black as well as the full range of Meridian Select colour options.

The Meridian 808.3 Signature Reference CD Player is expected to be available in the UK from February 2010 at a suggested retail price of £10,000.00.

About Meridian Audio

Meridian is based near Cambridge, UK, and was founded in 1977 by Bob Stuart and Allen Boothroyd. With over 30 years' history of innovation and development of uncompromised consumer home entertainment systems offering exceptional performance, this award-winning company is widely recognised as a world leader in high-quality audio and video reproduction. Meridian developed the first audiophile CD player, the world's first consumer digital surround controller, and the MLP lossless packing system included in Blu-ray Disc. The company's optical disc players, DSP-based loudspeakers, video projectors, and scalars are unique in the industry, maintaining a super-quality digital signal throughout the path from the studio to the home, using advanced digital signal processing to deliver both a sweet, natural sound and smooth, crystal-sharp images with true cinematic realism. In late 2008, Meridian acquired leading networked media server developer Sooloos, and today the Meridian Sooloos Digital Media System offers a unique combination of superb digital audio quality with the world's most innovative, flexible and intuitive touch-screen-based home entertainment system.
